

# THE LocoScript 2 Family

PCW 9512

## More than word processing on your PCW9512

*With a PCW9512, you are already equipped with the LocoScript 2 word processor, LocoSpell spelling checker and the LocoMail mail merge program. But there are other fully integrated programs to help you make your PCW more productive.*

### LocoFile

*A system for storing names and addresses or other data on a series of 'cards' – which can be called up on screen whenever required. With LocoFile it's easy to incorporate your data in documents, print address labels and so on.*

**LocoFile: £29.95**

### Printer Drivers

*Extra programs that enable you to use over 300 different printers to print your LocoScript documents – from typewriters to sophisticated laser printers. And with the 24 Pin Printer Drivers you'll be able to print using all of LocoScript's characters – not just those built into your printer or available on a printwheel.*

**Printer Drivers Disc: £19.95**  
**24 Pin Printer Drivers Disc: £24.95**

### LocoFont 24

*A range of different typefaces in which to print your documents on a 24 pin dot-matrix printer. The typefaces available range from 'handwriting' styles to modern fonts for business use.*

**LocoFont 24 Text Set & Display Set: £24.95**

### Printwheels Disc

*Printer files to support all the different printwheels available for the PCW9512's built-in printer. Essential if you want to use a foreign daisywheel.*

**Printwheels Disc: £14.95**

### LocoMail User Guide

*Use this powerful part of your PCW's bundled software more effectively with our definitive guide. A disc containing the example applications it describes is also available.*

**LocoMail User Guide: £14.95**  
**LocoMail Examples Disc: £5.00**

## LocoFile

A system for storing data on a series of 'cards' – which are kept in order and can be called up on screen whenever required. The information can then be updated, printed out, or copied – in whole or in part – to another document.

Use LocoFile at home or work to:

- **Keep a computerised address book**
- **Index books, abstracts, photos, records etc.**
- **Record customer orders or sales information**
- **Maintain staff records**
- **Print address labels or to keep a personal organiser up-to-date**

## LocoMail User Guide

The PCW9512 User Instructions explains how to use LocoMail to prepare simple mailshots but this is only a fraction of what this powerful program can do. LocoMail can also select, do calculations and repetitive tasks, making it ideal for:

- **Creating targetted mailshots**
- **Sending out subscription reminders**
- **Producing invitations or addressing Christmas cards**
- **Raising invoices and producing monthly statements**

The 300-page LocoMail User Guide gives full details of LocoMail facilities. It also describes and explains a number of sophisticated LocoMail applications. The Master documents and datafiles associated with these LocoMail applications are also available – on the LocoMail Examples Disc.

## LocoFile and LocoMail together

Whilst each program is complete in itself, LocoFile and LocoMail together create a very powerful combination.

LocoFile provides the facilities you need to organise and maintain your data. LocoMail lets you use your data in all sorts of documents. Add LocoMail's arithmetic capabilities and you can create letters, invoices, reports, labels etc. – neatly sorted into order thanks to LocoFile and perfectly prepared thanks to LocoMail.

## LocoFont 24

A range of different typefaces in which to print your documents. The typefaces available range from 'handwriting' styles to modern fonts for business use. All except Old English let you print the full range of LocoScript characters.

- **Use LocoFont 24 with the 24 Pin Printer Drivers on a suitable 24 pin matrix printer to give similar results – but better and faster.**
- **Plus the LOCOCHAR 24 program which allows you to define 16 special characters for your own use.**

## Printer Drivers

Extra programs that enable you to use a wide range of different printers to print your LocoScript documents – from typewriters to sophisticated laser printers. Over 300 different printer models are supported.

What is more, these Printer Drivers allow you to extend the range of printer features you can use in printing your documents. As a rule, if both the printer and LocoScript support a particular print effect, then the correct Printer Driver will allow you to use this effect in printing your documents.

With a suitable 24 Pin Printer you can even print the full range of LocoScript 2's characters – including Cyrillic, Greek and a wide range of special symbols.

- **Use the standard set of Printer Drivers to print using your printer's built-in set of characters and fonts.**
- **Use the special set of '24 Pin Printer Drivers' with a suitable 24 pin dot-matrix printer to print the full range of LocoScript 2's characters.**

## Printwheels Disc

Each PCW9512 is supplied with the software to support two sets of printwheels on the built-in printer. For example, in the UK, it is supplied with the software to support English and Swiss-French wheels.

If you only use these sets of wheels on the built-in printer, you should have no problems but if you go beyond these wheels, you'll need to tell LocoScript about the wheels you're using.

The Printwheels Disc:

- **Includes definitions for all official Amstrad printwheels.**
- **Contains a program so that if you have a special wheel for the 9512's printer, you can set up LocoScript to use it too.**
